## DISTURBANCE

DEATH BY AUDIO

### TENSITY

Bidirectional control for the intensity.

### CENTER POINT

Controls the polarity/center point of the LFO.

### WIDTH

Range of the LFO.

When the WIDTH is below max, this control sets the range in which the effect operates. When WIDTH is turned all the way down, this control manually sweeps through the entire range of the pedal but there is never any modulation.

### MODE SELECTOR

Select between the FILTER, FLANGER, or FAZER effects.

(Inside trimmer)

### CV OUT

Modulate other effects with expression inputs.

### SPEED

Speed of the LFO (modulation).

### CV OUT VOLTAGE

Controls the maximum voltage of the output LFO, with a maximum of about 9v. CV OUT IS TIP HOT.

### TRIP

Pause and resume the LFO.

**POWER:** The DISTURBANCE operates off of a 9V DC center negative power supply and draws 67 mA of current.

DO NOT SEND MORE VOLTAGE OUT THAN THE PEDAL YOU CONNECT IT TO CAN ACCEPT.
